RE: Alberta Wilbert Sales,

The Isle of Mann Corporation is a West Coast based residential and commercial developer, with representation in Calgary.

In developing its Kinniburgh property in the Town of Chestermere, Isle of Mann became the major utility stakeholder, Together with the Town of Chestermere and adjacent developers in the design and construction of the major sewer servicing system for east Chestermere, including the extremely important lift station.

Isle of Mann reviewed the then proposed tender build cost and recommended that the sewage lift station be constructed as a design/ build project and moved forward in this regard.

During the process Isle of Mann overviewed the construction of the wet well and auxiliary items, selecting the Alberta Wilbert large diameter concrete barrels and floatation base including ladders, hatches platform, miscellaneous metals and delivery and install costs. Isle of Mann believes the Alberta Wilbert System was initial in saving nearly a million dollars in the total project cost.

Sincerely,

A handwritten signature in blue ink that reads "R. E. Donkin".

Bob Donkin
